BIOLOGIQUE RECHERCHE MASQUE EXFOLIATES AND REGENERATES

Masque Exfoliant

P50 Visage is an exfoliating, regenerating and unifying face mask designed for rough, dull and/or aging skin. According to Biologique Recherche, the formula is enriched with restructuring agents such as cotton oil and sacha inchi oil and moisturizing agents that include its proprietary Natural Moisturizing Factor and hyaluronic acid. It also contains P50, the most popular product in the Biologique Recherche line and the keystone to its skin care treatment regimens. The mask is said to replenish the epidermis once the dead cells have been removed from the skin's surface. It also contains lemon and henna extracts to brighten and unify the complexion.

Masque Exfoliant P50 Visage should be applied by a professional to the face, neck and décolleté to help restore the skin's elasticity and softness, treat hyperpigmentation and fight signs of premature aging.
