Biologique Recherche Renewing Hand Care

While hands enable contact with others, express pleasure and even supplement speech, they are also barometers of the aging process, and a reflection of external stresses and environmental factors, such as sun, wind, detergents and smoke, that make skin more sensitive and vulnerable. [Ultraviolet](#) rays, cold and hot [water](#), and other aggressors ultimately weaken the hydrolipidic film of the skin and compromise its ability to act as a protective barrier, accelerating the aging process and causing nails to become more fragile over time.

MasqueGommageMainsBiologique

Biologique Recherche has created a new system of renewing hand care products designed to treat the effects of external aggressors. The first, Masque Gommage Mains, is formulated to treat dry and dehydrated hands with three-fold action, including exfoliation, moisturizing and repair, and unification of the skin's epidermis. The Cream Scrub contains White [Clay \(Kaolin\)](#) and Jojoba Wax Beads, and doubles as a mask. It features a Poly-Alpha-Hydroxy Acid Complex to accompany the natural exfoliation process, and is rich in moisturizing and re-plumping actives like [Hyaluronic Acid](#), as well as purifiers like Burdock Extract, and unifying ingredients, such as Lemon and Sorrel Extracts. The exfoliation stimulates cellular renewal, while the moisturizers treat the upper layers of the epidermis, and the unifiers reduce pigment imperfections, while totally cleansing and disinfecting the nail cuticle area. According to Biologique Recherche, the result is smooth, unified skin, softened cuticles, strengthened nails and stimulated nail growth. The product retails for \$49, for 75ml/2.54 oz. tube, and is also available in a professional size 200ml tube format.
